DETAILED ACTION

Applicant's amendment filed 6/22/2005 is acknowledged. Claim 1-4 and 6-22 are pending.

Response to Arguments

Applicant's arguments, see Remark, filed 6/22/2005, with respect to the rejection(s) of claim(s) 1-4 and 6-22 under Brickman and Heuer have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of W. P. Hill (US 2,561,278) and M. H. McTurk (US 2,453,448).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over W. P. Hill (US 2,561,278) in view of M. H. McTurk (US 2,453,448). Hill discloses (figures 1-4) a refrigerator condenser (11) comprising a circular tube having fins (35) attached on the tube and bent in to a spiral shape defining a continuous layer condenser surface. Hill does not disclose that the fin is a wire member. Turk discloses (figures 1-2 and column 1, lines 13-24 and column 3, lines 57-75) a circular condenser tube that is provided with a plurality of wire fin members (2) for a purpose of improving heat transfer efficiency and easing the cleaning process of the condenser. Since Hill and Turk are both from the same field of endeavor and/or analogous art, it would have been

obvious to one having ordinary skill in the art to use Turk's teaching in Hill's condenser for a purpose of improving heat transfer efficiency and easing the cleaning process of the condenser.

Allowable Subject Matter

Claims 1-4, 6-20 and 22 are allowed.
